

## DIGITAL RETINAL PHOTOGRAPHY

Dr. Sosebee is pleased to be able to offer high resolution digital retinal photography to document the condition of the eye, and to carefully monitor eye disease change over time.

A baseline retinal screening photograph is valuable in several ways:

- To recognize changes in the eye over time and to verify the previous absence or presence of a particular finding.
- May eliminate the need for dilation.
- The electronic file of the photograph can be forwarded to you or another doctor whenever needed.
- You can see what the doctor is seeing in your eye, and better understand the findings.

This screening is strongly recommended if you or a family member have a history of certain conditions such as diabetes, high blood pressure, macular degeneration, glaucoma and high prescriptions.

Medical insurance covers photography when there is a medical indication for documentation. Vision insurance plans do not include advanced disease detection procedures like retinal photography.

**The fee for the digital retinal photography is only \$35.00 and is due at the time of service.**

I have read the information about retinal photography.

\_\_\_\_\_ Yes, I want to take advantage of screening retinal photography.

\_\_\_\_\_ No, I decline screening retinal photography unless the doctor observes something that requires photographic documentation.
